Canto Cumulus 8.1 Available

Canto has announced the availability of an update to Canto Cumulus Single User.

Cumulus V8.1 is a minor update to the existing version 8 and includes some bug fixes but no major new functionalities - it introduced some major changes to the client-server editions of Cumulus. The main improvements for Single User edition are in the search/sort performance.

The User and Installation Guides have also been updated.

Please download the software in demo mode and follow the Installation Guide to update your existing installation - you will need to modify the License with your serial ID to change it from demo mode to the full licensed version. You will not need to migrate your existing catalogs - Cumulus will recognise your existing v8 installation.

The download links for 8.1 software and documentation are available at <http://www.databasics.com.au/csu8.html>

Please email support@databasics.com.au if you have queries.
