New FREE online *Mac the Magazine* - check it out!

A fantastic new global Mac magazine has launched — for free, thanks to a new publishing model. It's called MacTheMagazine and you'll find it at <http://www.macthemagazine.com> (click the top right corner to turn the pages)!

Matthew JC. Powell, former Australian Macworld editor, has teamed up with Sproog Media to launch MacTheMagazine, which is the centrepiece of a multi-platform publication called MacTheMag incorporating blogs, forums, podcasts and more. The magazine is readable online completely free of charge. Or you can purchase a downloadable/printable subscription for a mere \$20/yr!

DataBasics is offering special discounts on Canto Cumulus 8 Single User for both free and paid annual subscriptions. See MacTheMagazine online (pages 36-37) for details.

Dynagram ships DynaStrip 6 - Press release

Online at http://www.databasics.com.au/docs/dynagram_dynastrip6_pr.pdf (PDF)

Highlights:

* Complete Update of the Workstyles *

The workstyles functionality has been completely reworked to offer more flexibility for work & turn jobs. On the light table, when adding a sheet with a Work & Turn or Work & Tumble attribute, a symmetry axis line will be drawn in the middle of the surface to split it in two halves, simulating the front and the back.

* The Layout Re-flow feature *

The all-new Layout Re-flow feature is designed to make changes to multi-sheet layouts as simple as a single click. With this new feature, users can modify layout attributes, page and sheet marks on the first signature or modify the document list then by clicking the Re-Flow button the entire job is re-flowed based on all the new changes. No need to manually add/remove signatures or make new templates for minor global changes.

View the movie on the new Layout Re-flow feature at:

http://www.dynagram.com/movies/default.asp?m=Dynagram-DynaStrip-Use_Reflow_Layout

Heymann Consulting ListSearch EJaP 8

ListSearch is a new EJaP add-on module for Cumulus Workgroup/Enterprise.

ListSearch allows users to search for records in the Cumulus catalogs specified in a text list. This can be e.g. a list of filenames, product codes, article numbers, etc.

Each list entry will be converted into a configurable search query. The search result of all these search queries will be displayed in the front-most Cumulus Collection window. A log informs about empty search results of single queries or if the single results contain more than one record at a time.

Technical Hints and Tips - Cumulus User Live Filtering

Note: formerly an Enterprise-only feature, this add-on module is available for Cumulus 7.6 and Cumulus 8+ Pricing is on the pricelist at http://www.databasics.com.au/docs/canto_auprice.pdf (PDF)

More info is available in the datasheet:
http://www.databasics.com.au/docs/c7_permissions_livefiltering.pdf (PDF)

Ever wondered what Cumulus "live filtering" is all about? Ever wanted to restrict searching to specific criteria determined by you?

Most of the time we search, we have in mind restrictions on the results we want to see. We want to see approved files, or PDFs only, or some combination thereof. Then, within those restrictions, we want to find certain files.

...see over page...

User Live Filtering enables users to fine tune the asset records they see to only those that fit certain criteria, such as certain file formats, certain statuses, or any combination of available metadata. No matter what searches are performed - Quicksearch, Find Window, category browsing or more - only asset records that meet the chosen criteria are shown. Filter criteria can then be saved and shared with other users for instant recall.

For more info and screenshots see Canto's blog:

<http://blog.canto.com/?p=3918&language=en>

More information on some of the other upgrade module features in Cumulus 8 is available : http://www.databasics.com.au/docs/c8_upgrade-modules.pdf (PDF)
