## Ganging of jobs using DynaStrip®

### DynaStrip Imposition Software

DynaStrip's family of stand-alone imposition software is the most complete and advanced on the market for today's printers. DynaStrip easily handles any job regardless of its complexity. With DynaStrip, you can process more print jobs, improve service levels and increase client capacity. Compatible with all major workflows and in tune with emerging technologies and standards, DynaStrip is the one imposition solution that makes your work flow.

When creating flatwork, DynaStrip offers both flexibility and ease of use.

### Ganging of Jobs

Maximize your press sheet by placing different jobs on the same sheet. Combine business cards, posters or flyers easily. There is virtually no limitation to the page size or number of pages on the sheet. Ganging of jobs allows you to save time and money by making a run more profitable.

### DynaStrip offers numerous advantages when it comes to imposing flatwork

#### 1) Page format

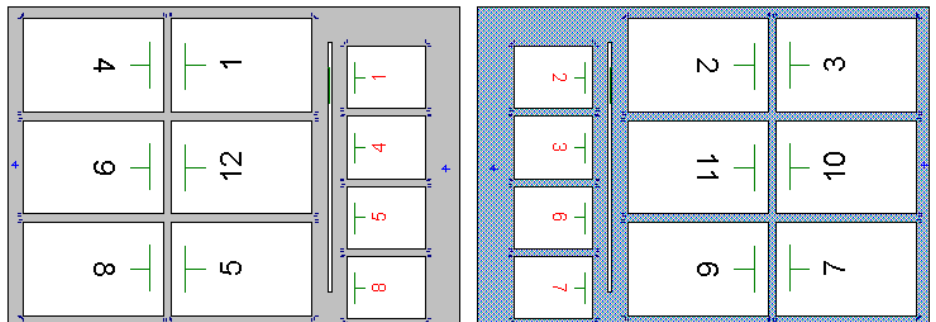

You have the possibility to impose one single page format (ex.: only business cards) or different page formats (ex.: post cards and business cards) on the same sheet, using the signature object.

#### 2) Flexibility

Once your signature (page group) has been placed, DynaStrip allows you to modify the size of one of the page, if needed, without having to build two different signatures or define an independent page. Moreover, the position palette and anchor points allow you to place one object (page, mark, etc.) relatively to another object on the sheet.

#### 3) Document list

DynaStrip can link multiple document lists to a job, whether there is one or multiple page formats. Each signature is paginated from page 1 and each sequence is being displayed in its own color on the Design Window. You can have up to 200 document lists. The multiple document lists feature is very helpful for the ganging of different jobs in the same sheet layout.

DynaStrip's Design Window, with two different signatures on one sheet.
