## **UGSoft's ES-Backup 4.0 released - Press release Jan 2008**

---

### FOR IMMEDIATE RELEASE ###

*January 2008, Hannover, Germany* - UGSoft has released the new data backup software ES-Backup 4.0 for Mac OS X, Solaris and Linux.

ES-Backup 4.0 offers a re-designed user interface and the ability to verify backed up files with the original data on disk to ensure the backup media can be read and contains all requested data.

Assistants guide through the important tasks such as starting backup and restore operations and setting up scheduled backups. Users can choose a suitable backup strategy - daily, weekly or monthly full and incremental backups - from predefined settings and may customise them for special needs. Analysis charts with amount of data to backup, backup duration and number of required backup media for each backup help to decide on the most suitable strategy.

Attached backup devices are determined and setup automatically according to the chosen backup strategy.

The new tape library status display informs about tapes in changer slots, firmware revision levels and allows the movement of tapes between slots and tape drives manually.

ES-Backup 4.0 supports Mac OS X Leopard, Tiger and Panther on Intel and PPC processors, Solaris 8/9/10 on SPARC and Intel as well as Linux on Intel. The new version supports HELIOS UB+ file servers and a wide range of tape drives and tape libraries connected via SCSI, FireWire, USB and Fibre Channel, backup-to-disk and harddisk synchronisation. Apple Time Machine volumes can be backed up the same way as mounted network volumes and local harddisks.

All functions are available on the local ES-Backup Server as well as on an unlimited number of network clients.

With prices starting at AUS \$858 incGST, ES-Backup 4.0 is an affordable alternative to Retrospect on Mac OS X. Updates from previous versions are available depending on product package. Local harddisk synchronisation is available in the ES-Backup demo version's Syncro Mode free-of-charge.

ES-Backup 4.0 can be downloaded as an update, demo and full version from UGSoft's website <http://www.ugsoft.de/intl/esbackup>. More information and pricelist is available from <http://www.databasics.com.au/helios/ugsoft.html>.
