

The Seamless Link Between Creation And Production

PrintSure allows printers, publishers and prepress bureaus to reach out to their customers and offer them a simple way to check, fix and submit jobs in real-time.

Job submission made easy

On the production side PrintSure enables you to define submission flows for your customers, each composed of a preflight profile, an electronic job ticket and a submission location. These flows allow customers to submit jobs via a browser or install a desktop client which is distributed automatically and installed on the customer's desktop by the DevZeroG unique 100% Web Installer. Customers then submit their jobs by simply dragging their files on the droplet. PrintSure will perform a local preflight check with clear error indication and will fix errors where needed and wanted. The customer will then be asked to fill in a job ticket or insertion order, copy instructions, etc, after which the job will be sent off to the correct destination. Alternatively jobs can be submitted through a web browser without anything having to be installed, but still with the benefit of real-time, client-side processing. This easy process makes job submission a true value adding service to your customers instead of a technical burden.

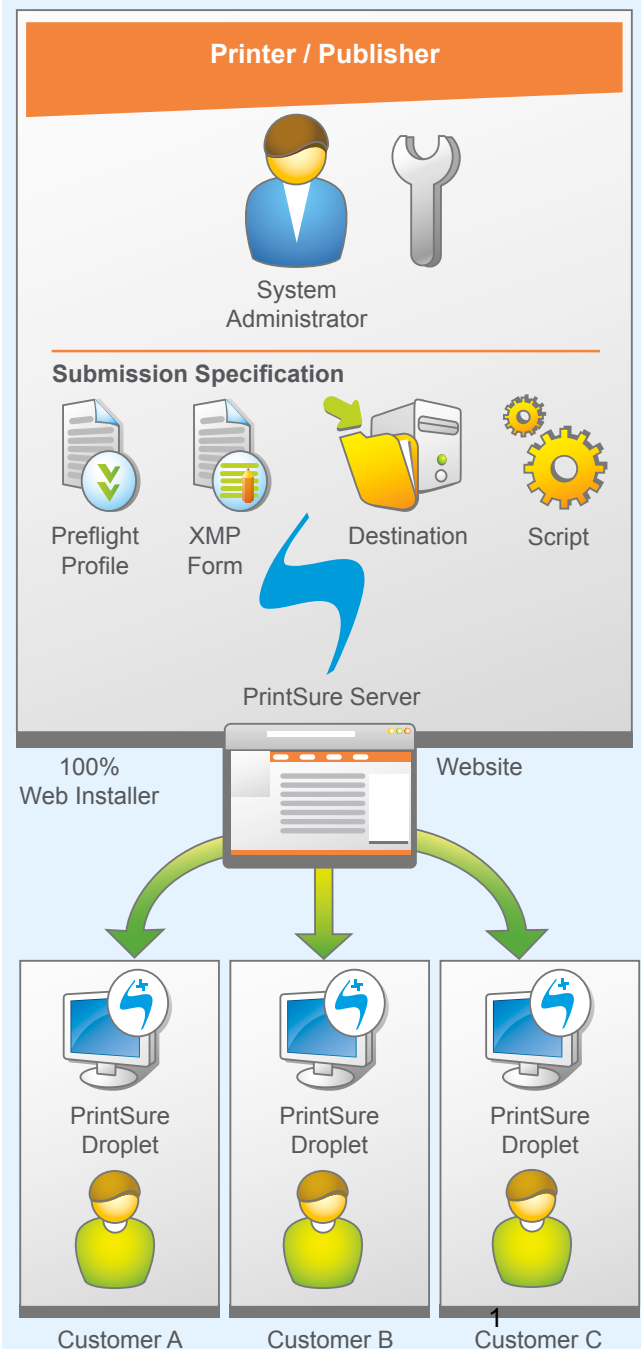

Move automation upstream

Through its advanced integration capabilities PrintSure creates a direct link between your customer's desktop and your existing production environment. Its scripting capabilities, metadata collection and XMP exportable logs allow you to connect PrintSure with your production planning and management information system (MIS), digital asset management system (DAM) and production automation tools.

Instant ROI

DevZeroG superior product concept and technology ensures you receive flawless jobs right from the start. Combined with a simple licensing model PrintSure gives you a quick return on investment and low total cost of ownership while preserving your existing investments.

Unique software distribution mechanism

Key Features

All-in-one process

DevZeroG's PrintSure is a web-to-print solution that truly connects the creative process with the production process by integrating client software distribution, job quality control, collection of administrative data and file transfer into one seamless process.

Unique automatic software distribution

The DevZeroG unique 100% Web Installer reduces the involvement of the customer in the client software installation process virtually to zero. The client software installation is a real no-brainer - downloading, installation and configuration is all automatic. The droplets can contain multiple flows and are automatically updated whenever changes are applied to on the server to preflight profiles, job tickets and other settings.

Superior industry standard compliant preflight

DevZeroG has developed its own superior PDF/X and Ghent PDF Workgroup compliant preflight technology. Without the need for any additional software the PrintSure client locally identifies the problems with the PDF and either fixes them automatically or visually highlights them for manual correction in the native application.

Integrated Jobticket capabilities

The XMP-based job ticket functionality allows you to collect additional data from the customer and attaches it automatically to the file prior to upload. This data can then be used downstream for administrative purposes such as billing or production planning or for production automation such job routing.

Apply your own corporate identity

You can create an even tighter relationship with your customer and promote your brand actively by applying your company's identity to the web portal and the droplet icon.

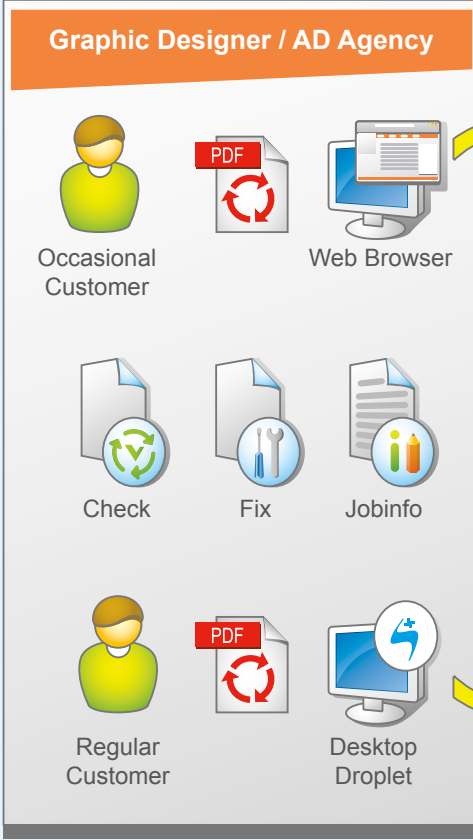

Central web-based configuration and administration

The web-based configuration interface allows system administrators to maintain and monitor the application from anywhere.

Advanced scripting and integration capabilities

Built on de facto standard technologies and file formats such as JAVA, SQL and XML, PrintSure is cross platform (OS X, Windows, Linux) and can be easily integrated into other production and administration systems through scripting languages such as Perl, CGI, Apple- and JavaScript or any other language which is executable on the machine, including compiled applications. Parts of the PrintSure system can also be embedded within your existing web application or portal.

Five User Roles

Profile Editor

XMP Form Editor

Mac Desktop Preflight Client

Benefits

Reduce Cost

- ✔ Receive flawless files: Gone are the days of manual fixing and messed up production planning
- ✔ Catching problems early means no rushed jobs or missed deadlines
- ✔ No additional load on your support department through low technical involvement from client
- ✔ Preserve existing investment through integration capabilities
- ✔ Fast return on investment starting at throughput of 10 files per day
- ✔ Low total cost of ownership: no per seat licensing, easy setup and maintenance

Increase Profit

- ✔ Increase productivity through hands off file routing and scripting capabilities
- ✔ On-time production means not spending money on rushed shipping or overtime

Retain customers

- ✔ End-to-end Solution: Retain your customers by linking their desktop to you production environment
- ✔ Missed deadlines and delays can mean lost customers

System requirements

PrintSure Server

Macintosh®

Mac OS X 10.3.9 - 10.4.7
Java 2 ver. 1.4.2 and above
CPU - PowerPC G4 Processor 1.2 GHz

Windows®

Microsoft Windows 2000/XP/2003
Java 2 ver. 1.4.2 and above
CPU - Pentium IV 2.5 GHz

Linux

Linux Fedora Core III, IV
Java 2 ver. 1.4.2 and above
CPU - Pentium IV 2.5 GHz

Memory

RAM - 1 Gigabyte
HDD space - about 250 Megabytes

PrintSure Client

Macintosh®

Mac OS 9.2.2
Mac OS Runtime for Java 2.2.6 OR
Mac OS X 10.3.9 - 10.4.7
Java 2 ver. 1.4.2 and above
CPU - PowerPC G3 Processor 600 MHz

Windows®

Microsoft Windows 2000/XP/2003
Java 2 ver. 1.4.2 and above
CPU - Pentium III 500 MHz

Memory

RAM - 512 Megabytes
HDD space - about 10 Megabytes

Connected media production

In today's media, advertising, print and video industries creation and production are two worlds apart. While one thrives on creativity and fun, the other can only survive through efficiency and automation. DevZeroG connects these worlds by providing tools to prepare, transfer and process the extensive amount digital data produced in these industries. At leading media and production companies, DevZeroG products, nVerge, PrintSure and Uploader Creator play a key role in ensuring every job is delivered on time and according to the expected quality standards.

Vision & Technology

The Internet has opened both for consumers and businesses new gateways of communication. Slowly but surely it has outgrown this function to become a platform that enables on-demand delivery of enterprise level applications. DevZeroG is a leader in shifting from traditional desktop or client-server applications to fully Internet-enabled solutions that offer easy access and flexible integration to businesses participating in the media supply chain.

Based on industry standards, DevZeroG has developed core technologies such as the superior JAVA-based PDF preflight engine, 100% Web Installer, its unbreakable file transfer framework, all aimed at improving the connectivity, quality control and automation capabilities of its products.

For the creative professionals DevZeroG removes the technical complexity from tasks such as file quality control and job submission. As such its products offer superior solutions for all Web-to-Print, advertisement submission, video production and mission critical file transfer applications.

Local Sales & World-class Support

With the best response and resolution times in the industry and an extensive network of resellers, Dev Zero G provides superior sales support to an ever-expanding global client base.
