

Cumulus Video Cloud

Automatic video conversion for multiple platform viewing and global video streaming, all managed within Cumulus.

Publish videos that play properly on any platform, within any browser and on any device, including high-volume concurrent viewing, with Cumulus Video Cloud.

Cumulus Video Converter

Cumulus Video Converter is perfect for companies that need an easy way to convert video content into various formats. When uploading a video file into Cumulus, **metadata is automatically extracted** and you get all the power of adding additional metadata – for easy searchability. And yet, with just one click, Cumulus Video Converter takes care of **converting the file into all frequently used video formats** such as flv, wmv, mp4, mp3, 3gp.

Direct download links for each format can be accessed directly in Cumulus and shared with colleagues, customers or freelancers.

Cumulus Video Streaming

Cumulus Video Streaming enables companies to **publish video content globally** with the best possible user experience. Cumulus Video Streaming uses HTTP Live Streaming (HLS) to automatically recognizes the device and platform and chooses the right format and quality level to display, up to HQ+.

Don't worry about the details

Managing video content is a technical challenge - with Cumulus Video Cloud **no internal resources or server capacities** are needed. The Video Cloud takes care of everything.

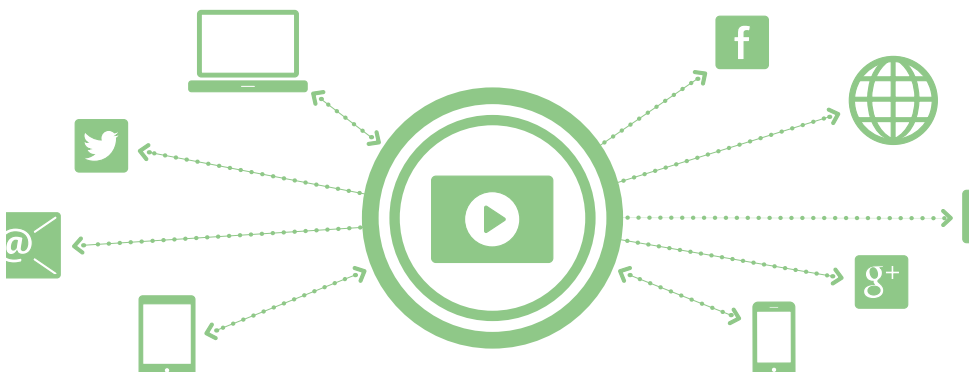

Content you control

Unlike public video management tools, you keep **full rights to the content** you upload and no Ads are displayed.

Key features

- Convert videos in different formats
- Publish videos across all channels
- High quality video streaming with automatic device recognition

Need more functionality?

For organizations that seek basic online video editing, generation of overlays or creation of video slide shows – we have Video Manager Integration – an integration service we offer in cooperation with our partner MovingIMAGE24.
